

# Task 3: Mini Server Monitor Script

1. Install `nginx` :

```
sudo apt update
sudo apt install nginx -y
```

2. Create the script `monitor.sh` :

```
nano ~/monitor.sh

#!/bin/bash

LOGFILE="/var/log/monitor.log"
TIMESTAMP=$(date "+%Y-%m-%d %H:%M:%S")

echo "==== [$TIMESTAMP] Server Monitor Check =====" >> "$LOGFILE"

if systemctl is-active --quiet nginx; then
echo "[$TIMESTAMP] nginx is running." >> "$LOGFILE"
else
echo "[$TIMESTAMP] nginx is NOT running. Attempting to start..." >>
"$LOGFILE"
systemctl start nginx
if systemctl is-active --quiet nginx; then
echo "[$TIMESTAMP] nginx started successfully." >> "$LOGFILE"
else
echo "[$TIMESTAMP] Failed to start nginx." >> "$LOGFILE"
fi
fi

echo "[$TIMESTAMP] Memory Usage:" >> "$LOGFILE"
free -h >> "$LOGFILE"

echo "[$TIMESTAMP] CPU Load:" >> "$LOGFILE"
```

```
uptime >> "$LOGFILE"
```

```
echo "[$TIMESTAMP] Disk Usage:" >> "$LOGFILE"
```

```
df -h / >> "$LOGFILE"
```

```
echo "" >> "$LOGFILE"
```

```
chmod +x ~/monitor.sh
```

3. Give log file write permission

```
sudo touch /var/log/monitor.log
```

```
sudo chmod 666 /var/log/monitor.log
```

4. Add the script to crontab:

```
crontab -e
```

5. Confirm cron is running:

```
sudo systemctl status cron
```

```

(hari@kali)-[~]
└─$ sudo apt update
sudo apt install nginx -y

[sudo] password for hari:
Hit:1 http://http.kali.org/kali kali-rolling InRelease
All packages are up to date.
nginx is already the newest version (1.26.3-3).
nginx set to manually installed.
The following packages were automatically installed and are no longer required:
  python3-packaging-whl python3-pyinstaller-hooks-contrib python3-wheel-whl
Use 'sudo apt autoremove' to remove them.

**Conclusion:** Task 3 created a `monitor.sh` script to check `nginx` status, show system resource usage, and log results with timestamps. It was scheduled via cron to run every 5 minutes, enabling basic automated server monitoring.
